

DESMI

- pumps for naval applications

- Full understanding of Naval technical requirements and applications
- Right choice of construction materials to suit specific applications
- Pumps available in full shock rated design
- Pumps for fully submerged use in action damaged compartments
- Field engineers on hand to visit ships and evaluate pump and system requirements
- Project management team to produce all necessary documentation and certification

DESMI Pumps

knowledge & technology

DESMI

Navy activities

DESMI is actively supporting Navy activities in many ways:

- Special build projects for both new pumping applications and replacement programmes for obsolete equipment.
- Replacement pumps during docking periods for both Navy and Royal Fleet Auxiliary ships.
- Attendance on board ship by DESMI engineers to commission and oversee installation, and if required, evaluate pump and system requirements for rectification and change out.

DESMI have a full understanding of Naval technical requirements and applications when it comes to pumps and systems.

We can select the correct choice of materials and construction for each individual application - for example Bilge, Fire, Ballast, General Service, Cooling, Fuel and Lub Oil Transfer to name just a few.

Any of these pump applications can be supplied fully shock rated, and for fully submerged operation in compartments which are vulnerable to 'action' damage.

DESMI offer a complete package from 'request for quotation' to 'through life support' for our products, from a team who are dedicated to Naval applications and requirements.

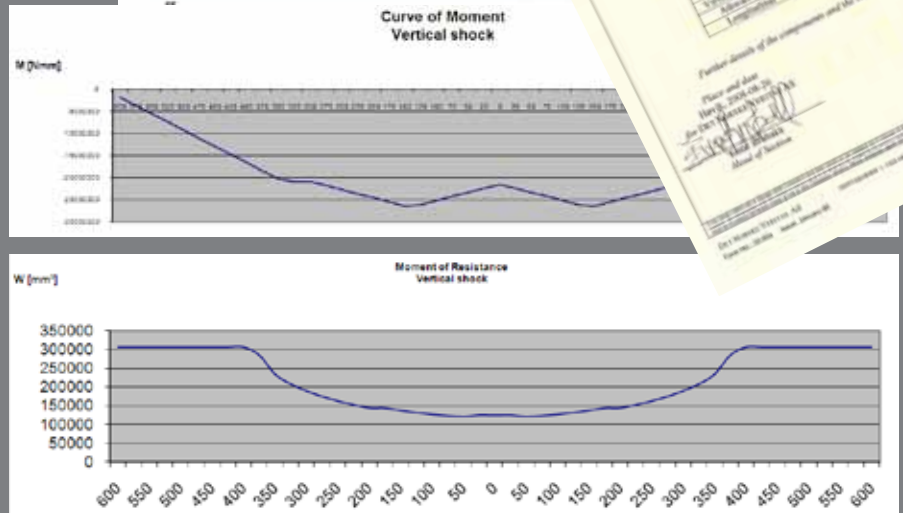

Documentation

Our Project Management team have the necessary experience to produce whatever documentation is required specific to contract, including Integrated Logistic Support (ILS) for through life maintenance of the ship and approved shock calculations.

We also have the capability to produce highly detailed 'as built' CAD drawings to contract requirements.

Example:
Vertical in-line pumps fitted with mid-mount for shock rated installation
